

US Energy Sector Vulnerabilities to Climate Change and Extreme Weather

This report—part of the Obama Administration’s efforts to support national climate change adaptation planning through the Interagency Climate Change Adaptation Task Force and Strategic Sustainability Planning process and to advance the U.S. Department of Energy’s goal of promoting energy security—examines current and potential future impacts of climate change and extreme weather events on the U.S. energy sector. It identifies activities underway to address these challenges and discusses potential opportunities to enhance energy technologies that are more climate-resilient, as well as information, stakeholder engagement, and policies and strategies to further enable their deployment.
